12.-16. soruları aşağıdaki parçaya göre cevaplayınız.

**Planet Earth is 4600 Million Years Old \***

It is difficult for us to think about such an enormous length of time, but if we simplify it into an understandable idea, we can compare the planet Earth to a person of forty-six years of age. Nothing is known about the first seven years of this person's life and very little information exists about the middle period; we know that it was only at the age of forty-two that Earth began to flower. Dinosaurs and great reptiles didn't appear until one year ago, when the planet was forty-five. Mammals arrived only eight months ago; in the middle of last week, the last Ice Age covered Earth. Modern man has been around for four hours. During the last hour, man discovered agriculture. The Industrial Revolution began just a minute ago. During those sixty seconds of biological time, Modern Man has made a rubbish tip of Earth. He has increased his numbers to terrible proportions, has caused the death of hundreds of species of animals, has robbed and destroyed the planet in his search for fuels; now he stands, like a violent, spoilt child, delighted at the speed of his rise to power, on the edge of the final mass destruction and of killing all the life which exists in the solar system.
